Summary

GATE CSE 2026 qualified final-year Computer Science student experienced in building secure, scalable full-stack web applications using React.js, Node.js, Express.js, and MongoDB. Hackathon finalist with proven ability to deliver production-ready products under pressure. Foundation in Data Structures and Algorithms.

Education

Islamic University of Science and Technology (IUST)

Bachelor of Technology in Computer Science — CGPA: 7.5 / 10

Srinagar, Kashmir

Aug 2022 – Aug 2026

Technical Skills

Languages:	C, Java, JavaScript
Web / Frameworks:	React.js, Node.js, Express.js, REST APIs, EJS, HTML, CSS, Tailwind CSS
Databases:	MongoDB, MySQL
Tools:	Git, GitHub, Postman, VS Code, JWT
Core Concepts:	Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Problem Solving

Projects

FinForge

[Live Demo](#) | [GitHub](#) | April 2026

React, Tailwind CSS, Node.js, Express.js, MongoDB, JWT, Recharts

- Architected a full-stack financial platform enabling users to track 3 core financial categories - income, expenses, and transaction history - through a clean, intuitive interface.
- Implemented JWT-based authentication with protected API routes, ensuring secure access to all financial data.
- Built interactive dashboards using Recharts to visualize spending patterns and financial trends over time.
- Implemented transaction filtering, sorting, dark mode toggle, and multi-currency support to enhance usability.
- Designed and consumed RESTful APIs following industry-standard practices for data handling and error management.

IntervueAI

[Live Demo](#) | [GitHub](#) | May 2026

React.js, Node.js, Express.js, MongoDB, JWT, Gemini API, Hugging Face, PyTorch

- Built a full-stack AI interview practice platform scoring users on facial expression, speech quality, and answer content with a weighted composite scoring system.
- Fine-tuned MobileNetV2 on FER2013 (35,887 images, 7 emotions) and deployed on Hugging Face Spaces for real-time webcam-based emotion detection during live interviews.
- Integrated Google Gemini API with structured prompts to evaluate answers and return relevance, fluency, and clarity scores with fallback handling for invalid responses.
- Implemented JWT access and refresh token auth, bcrypt hashing, rate-limited endpoints, and input validation for secure API access.
- Built an analytics dashboard with Recharts and a jsPDF report generator with date-range filtering and PDF export.

Local Services Aggregator Platform

[GitHub](#) | July 2025

React.js, Node.js, Express.js, MySQL, JWT, Tailwind CSS | Hackathon — People 10

- Built a full-stack service booking platform end-to-end within 24 hours as part of a 4-member team.
- Designed 2 role-based dashboards (customer and provider) with distinct workflows, access controls, and real-time booking status updates (pending/accepted/rejected).
- Implemented JWT access and refresh token authentication with bcrypt password hashing and custom middleware for role-protected routes.
- Engineered a RESTful API with server-side validation including duplicate booking prevention logic.
- Structured a normalized MySQL schema to support service listings, bookings, reviews, and user roles.

Certifications

Delta — Full Stack Web Development | Apna College | 2025

Achievements

- Qualified **GATE CSE 2026** — a national-level Computer Science & Engineering exam conducted by IITs.
- Hackathon finalist — cleared 4 evaluation rounds and reached the final one-on-one technical round (2025).
